

OR-TEC ROCKER® Press

200, 300, 400 & 600 Series

The OR-TEC Rocker® Press is an enclosed high performance sludge dewatering system. It utilizes a central screw and a slowly rocking multi-disk filter to gradually increase pressure on flocculated sludge and produce an exceptionally dry cake. There is no physical contact between the screw and the multi-disk filter or between discs which prevents unnecessary wear and tear. Very low washwater, electrical and polymer use and high capture rates make the system a very affordable sludge dewatering solution.

The OR-TEC ROCKER™ Press features:

- Enclosed to minimize odors and noise
- Minimal operator requirement
- Easy to operate and maintain
- Very low wash water usage
- High cake solids
- Touchscreen operation

The OR-TEC Rocker® Press offers a completely operational, skid mounted and self-contained system which can include:

- Rocker® Press
- Controls
- Sludge Pumps
- Flocculation System
- Polymer Dosing Unit
- Sludge Cake Auger
