

COMPACTOR WASHER

WASH, COMPACT, AND ELEVATE SCREENINGS

The Or-Tec compactors are designed for applications where compacting and washing of screenings is required. A screw auger slowly moves the screened material and spray headers add washwater to clean the screenings. The screenings are then compacted using a swan neck or back pressure plate. Compacted material is discharged at a convenient height for easy disposal.

- Dewatering, compaction and conveying in one system.
- Inlet hopper and compaction zone wash stations
- Inlet perforations allow water to flow into the drain pan
- Swan neck open discharge, prevents blockage in discharge zone
- Stainless Steel Construction
- Straight discharge with back pressure plate (Optional)

**EASY TO INSTALL
& OPERATE**

**LOW
MAINTENANCE**

**COMPACTED
& WASHED
SOLIDS**

A - Inlet Hopper

B - Wash Station

C - Drain Pan

D - Swan Neck Discharge

E - Straight Discharge (Optional)
